The primary reason independent claims 11 is allowable because the prior record fails to teach or fairly suggest a source router comprising a first address memory configured to store a first host address of a destination mobile terminal associated with a routing address of the destination mobile terminal, in accordance with the instruction from a server; an address converter configured to delete the host address of the destination mobile terminal which is included in a packet received from a source mobile terminal as a destination address, and add the routing address of the destination mobile terminal which is associated with the first address of the destination mobile terminal in the host address memory to the packet; and a routing processor configured to route the received packet to the destination router connected to the destination mobile terminal, in accordance with the routing address of the destination mobile terminal.

The primary reason independent claims 13 is allowable because the prior record fails to teach or fairly suggest a destination router comprising a second address memory configured to store a host address of a destination mobile terminal associated with a routing address of the destination mobile terminal; an address converter configured to delete the second routing address of the destination mobile terminal which is included in a received packet as a destination address, and add the host address of the destination mobile terminal which is associated with the routing address of the destination mobile terminal in the second address memory to the packet; and a packet transferring processor configured to transfer the received packet to the destination mobile terminal, in accordance with the host address of the destination mobile terminal.
